

High Strength Elastomer

PV Fluid Products

- Part of “hard rubber” family
- 85-90 durometer
- 50% higher differential pressure which equates to 50% more torque at the bit with minimal RPM drop
- Resistant to chunking type failures due to high tensile strength and high modulus
- Specifically engineered for high aromatic / low aniline point drilling fluids
- Minimal or no swell due to chemical interaction
- Excellent performance, consistent and repeatable
- Designed for longevity in extreme applications
